DEODORIZER

SOLUBILITY

It is incorporated into the formulations like a fragrance. Water-based products must be solubilized with emulsifying agents (surfactants).

Oil-based products or emulsions can be used directly. Dosage depends on the product in which it is used. Tests have shown that works from 0.2% for cosmetic products and creams based on lactic acid, for example. Solvent odor neutralization is achieved from 1% depending on the type of solvent, the end base product and other factors.
